Deep Learning for PK/PD and Disease Progression Time-Course Predictions using Neural-ODE

PAGE 2021

James Lu, Brendan Bender, Yuanfang Guan, Pascal Chanu, Dan Lu, Joy C. Hsu, Jin Y. Jin

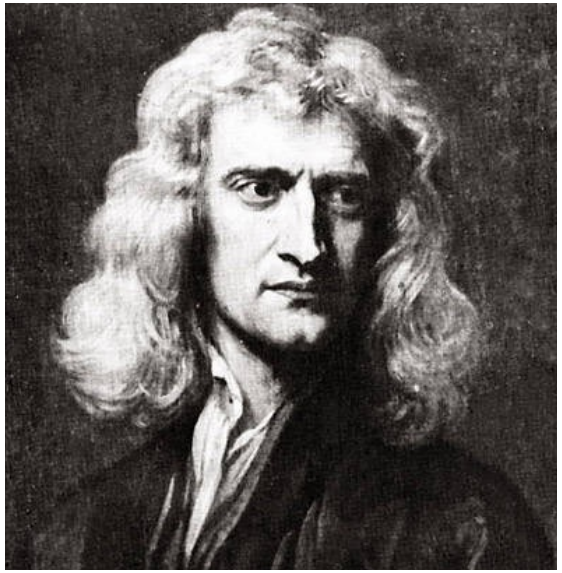
Topics

Genentech
A Member of the Roche Group

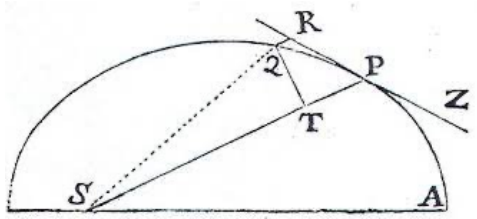
- Neural-ODE as an AI-powered time-course modeling methodology
- PK/PD application:
  - Platelet count under trastuzumab emtansine (T-DM1) treatment
- Disease progression application:
  - Geographic Atrophy (GA)

The beginnings of Differential Equation Modeling

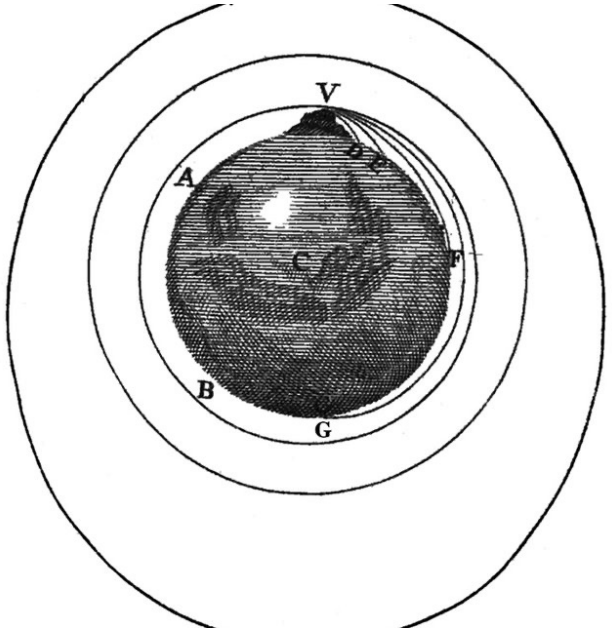
Genentech
A Member of the Roche Group



Analysis



Synthesis



Newton's anagram:
"It is useful to solve differential equations"

Description of a system divides into two parts:
- Dynamical equations
- Initial conditioins

A beautiful question, Wilczek (2015)

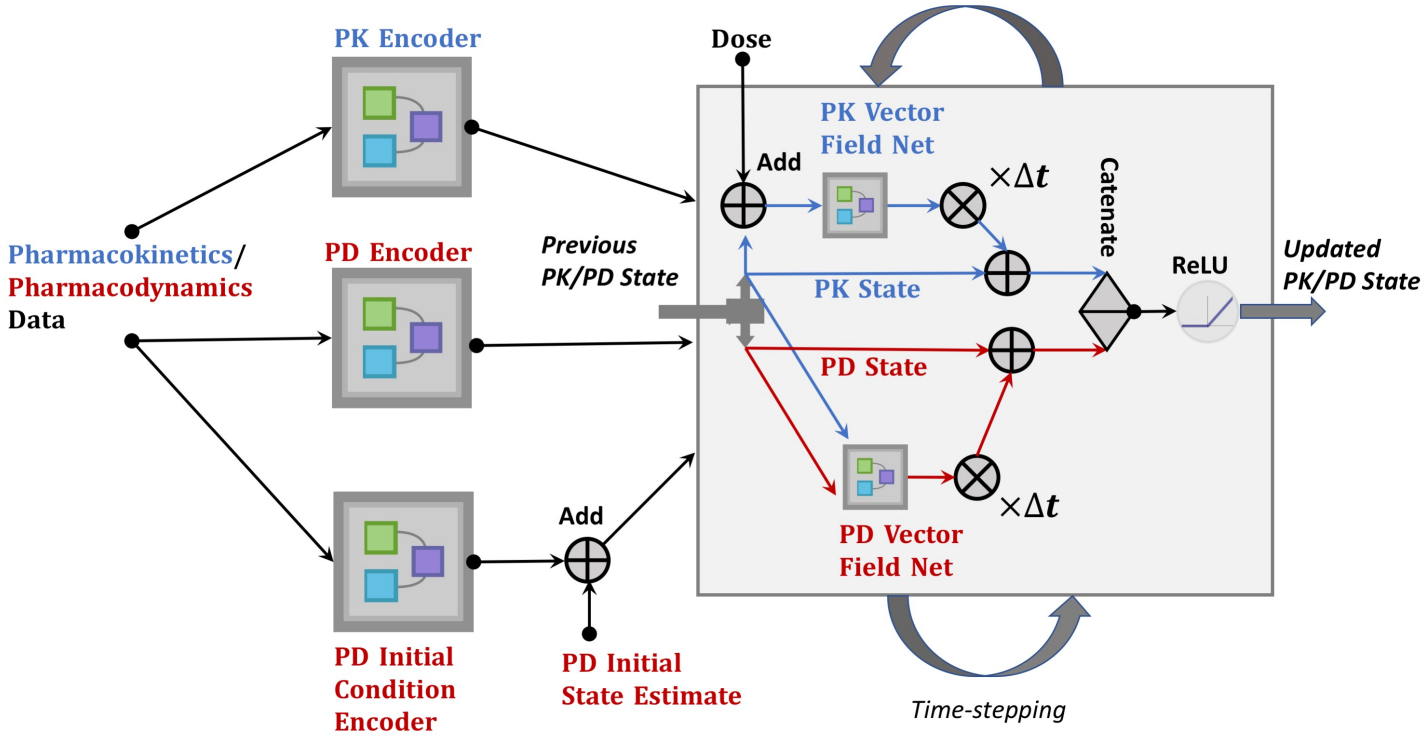
Platelet count prediction under T-DM1 treatment

NEURAL-PK/PD MODELING

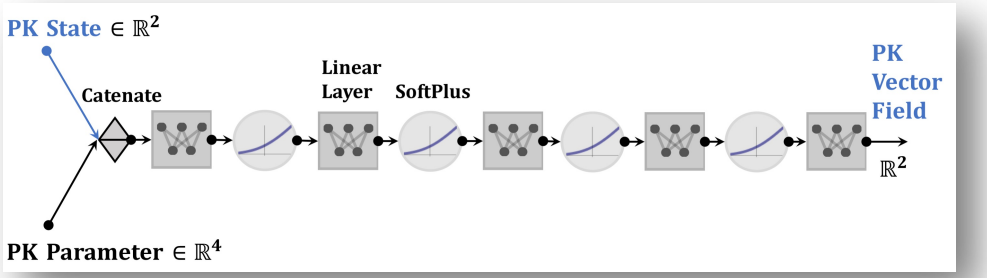
Deep Learning Methodology enabling PK/PD Model Discovery

Genentech
A Member of the Roche Group

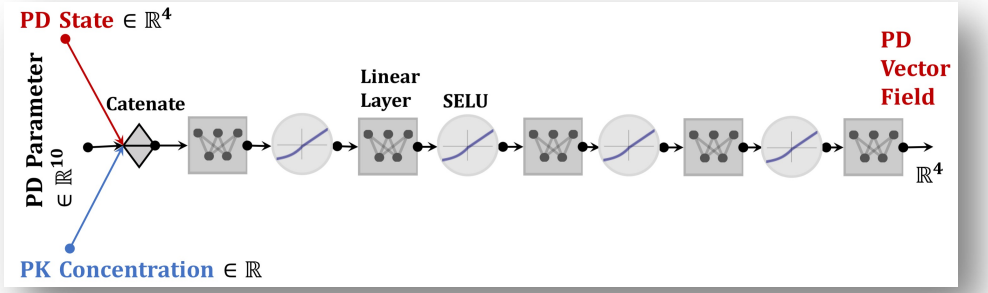
- Network architecture incorporates key causal assumptions:
  - Dosing drives PK
  - PK drives PD



PK Vector Field Net



PD Vector Field Net

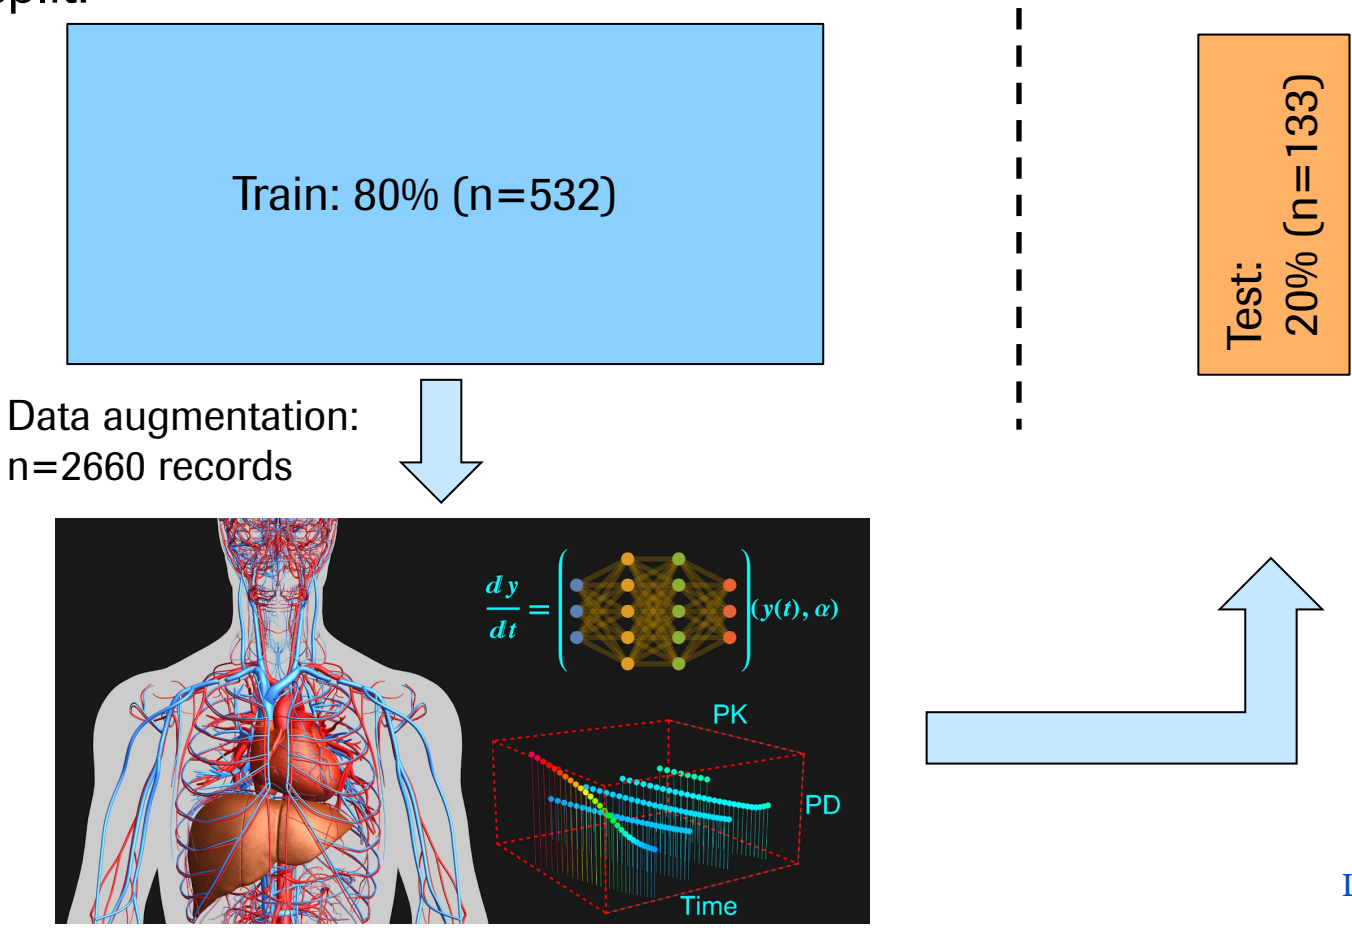


Lu *et al*, Nature Machine Intelligence (2021)

Clinical Data: Train and Test

- Compiled data: longitudinal platelet response from 665 patients
  - Phase I: *various doses and schedules*
  - 3×Phase II, 1×Phase III: *3.6 mg/kg, Q3W*

- Train and test split:

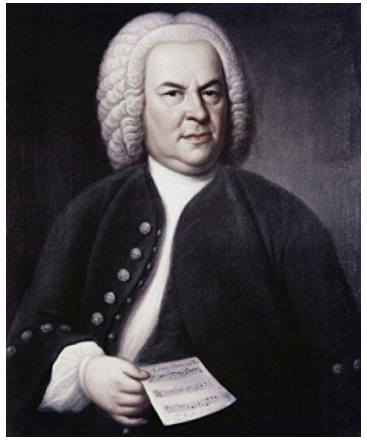


Lu *et al*, Nature Machine Intelligence (2021)

The Prediction Task

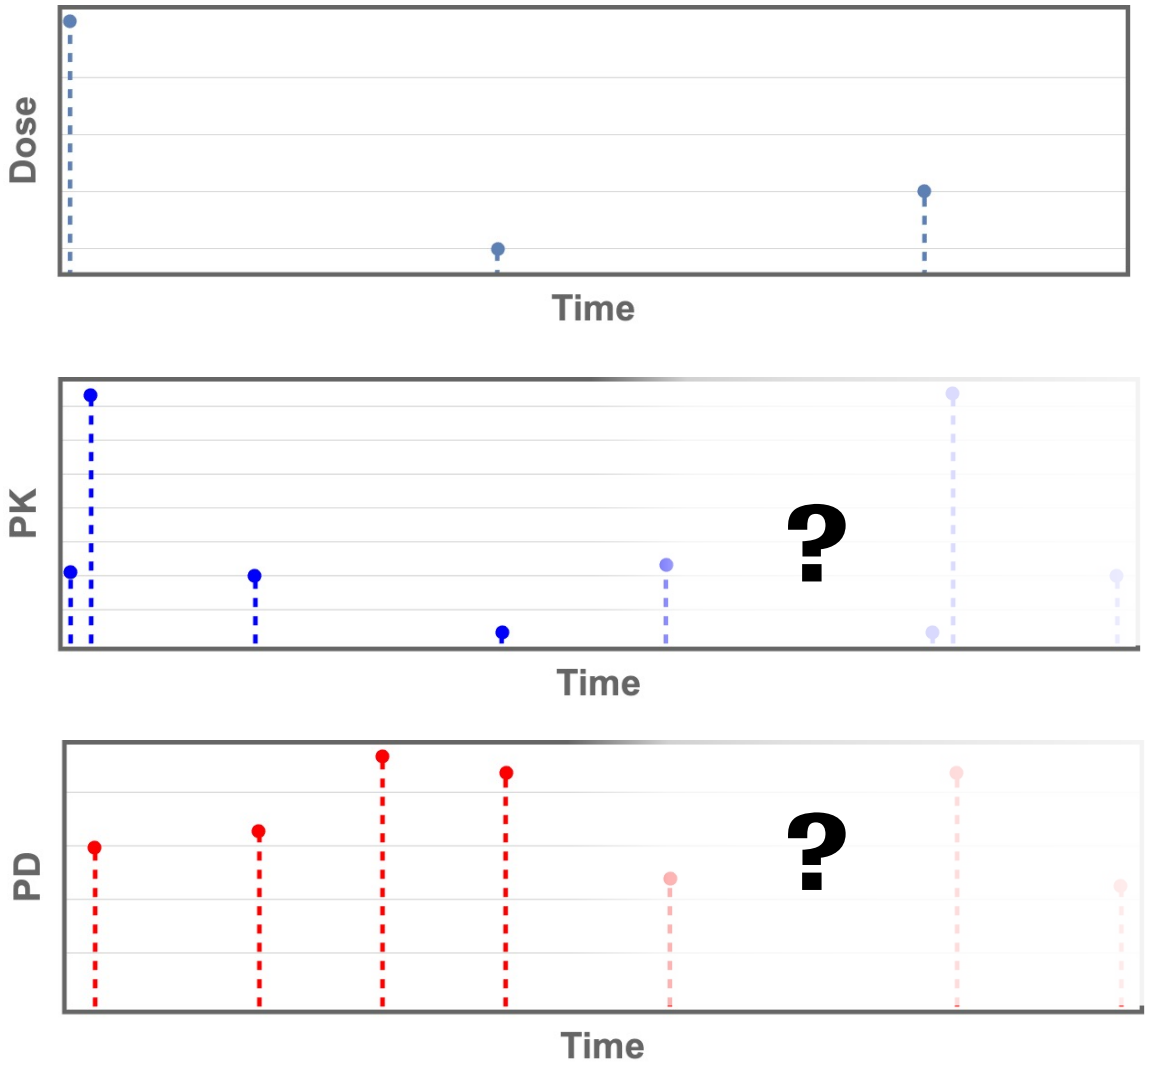
Genentech
A Member of the Roche Group

- Music analogy



schoolofcomposition.com

- PK/PD data

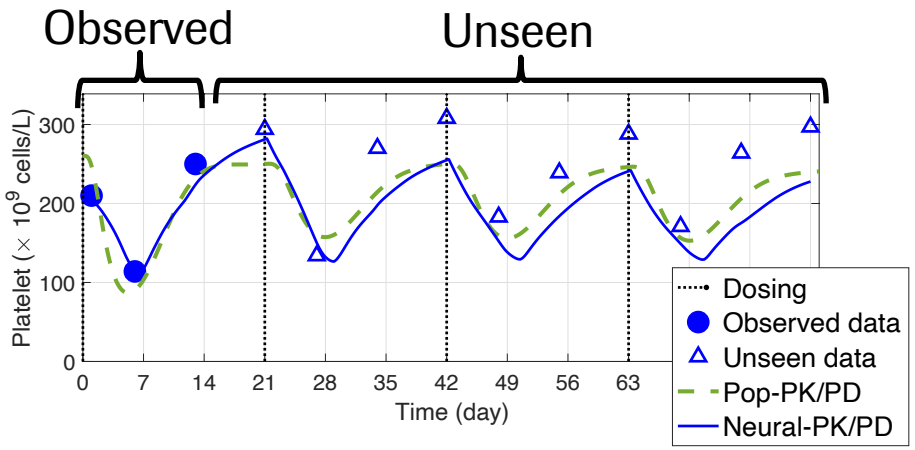


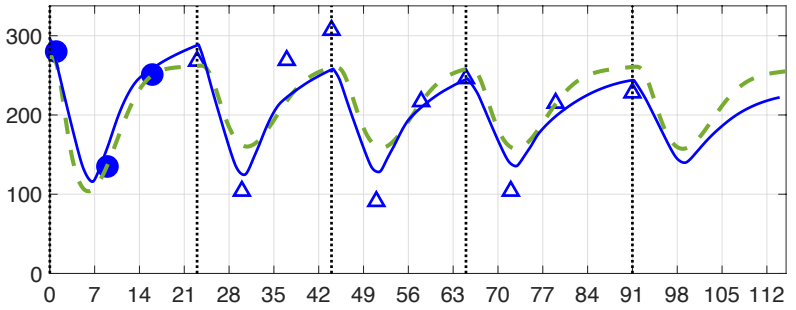
Neural-PK/PD Recapitulates Qualitative Dynamics

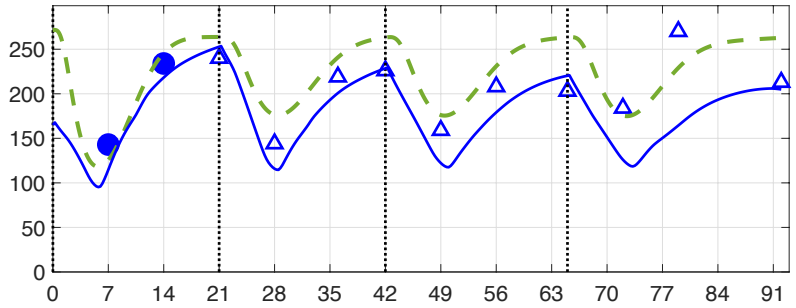
Genentech
A Member of the Roche Group

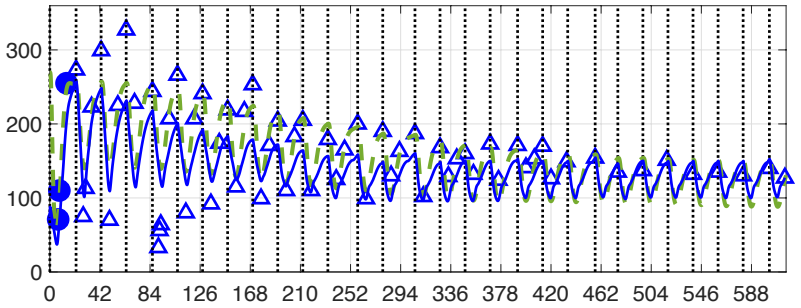
- Comparable to prior population-PK/PD model (Bender *et al*) based on the Friberg formulation

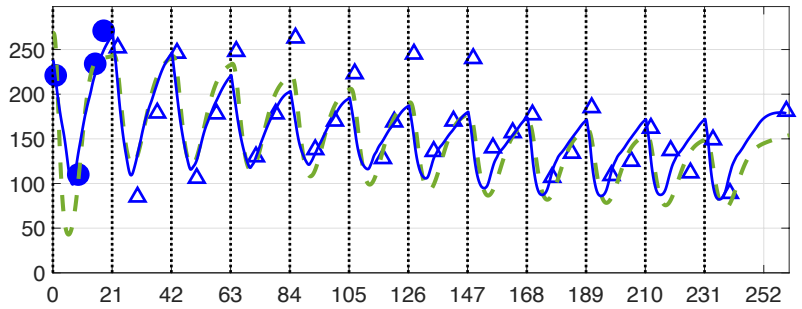
6 test patients shown

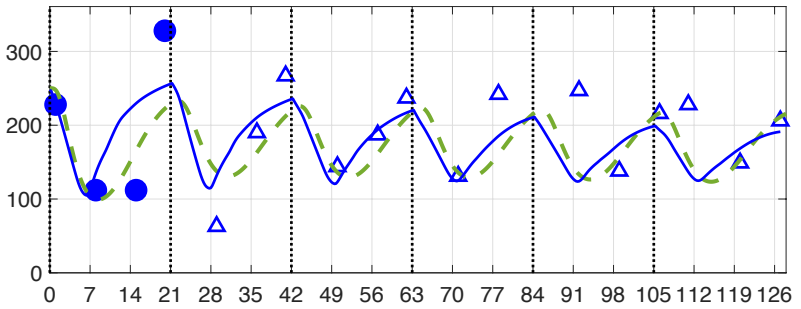








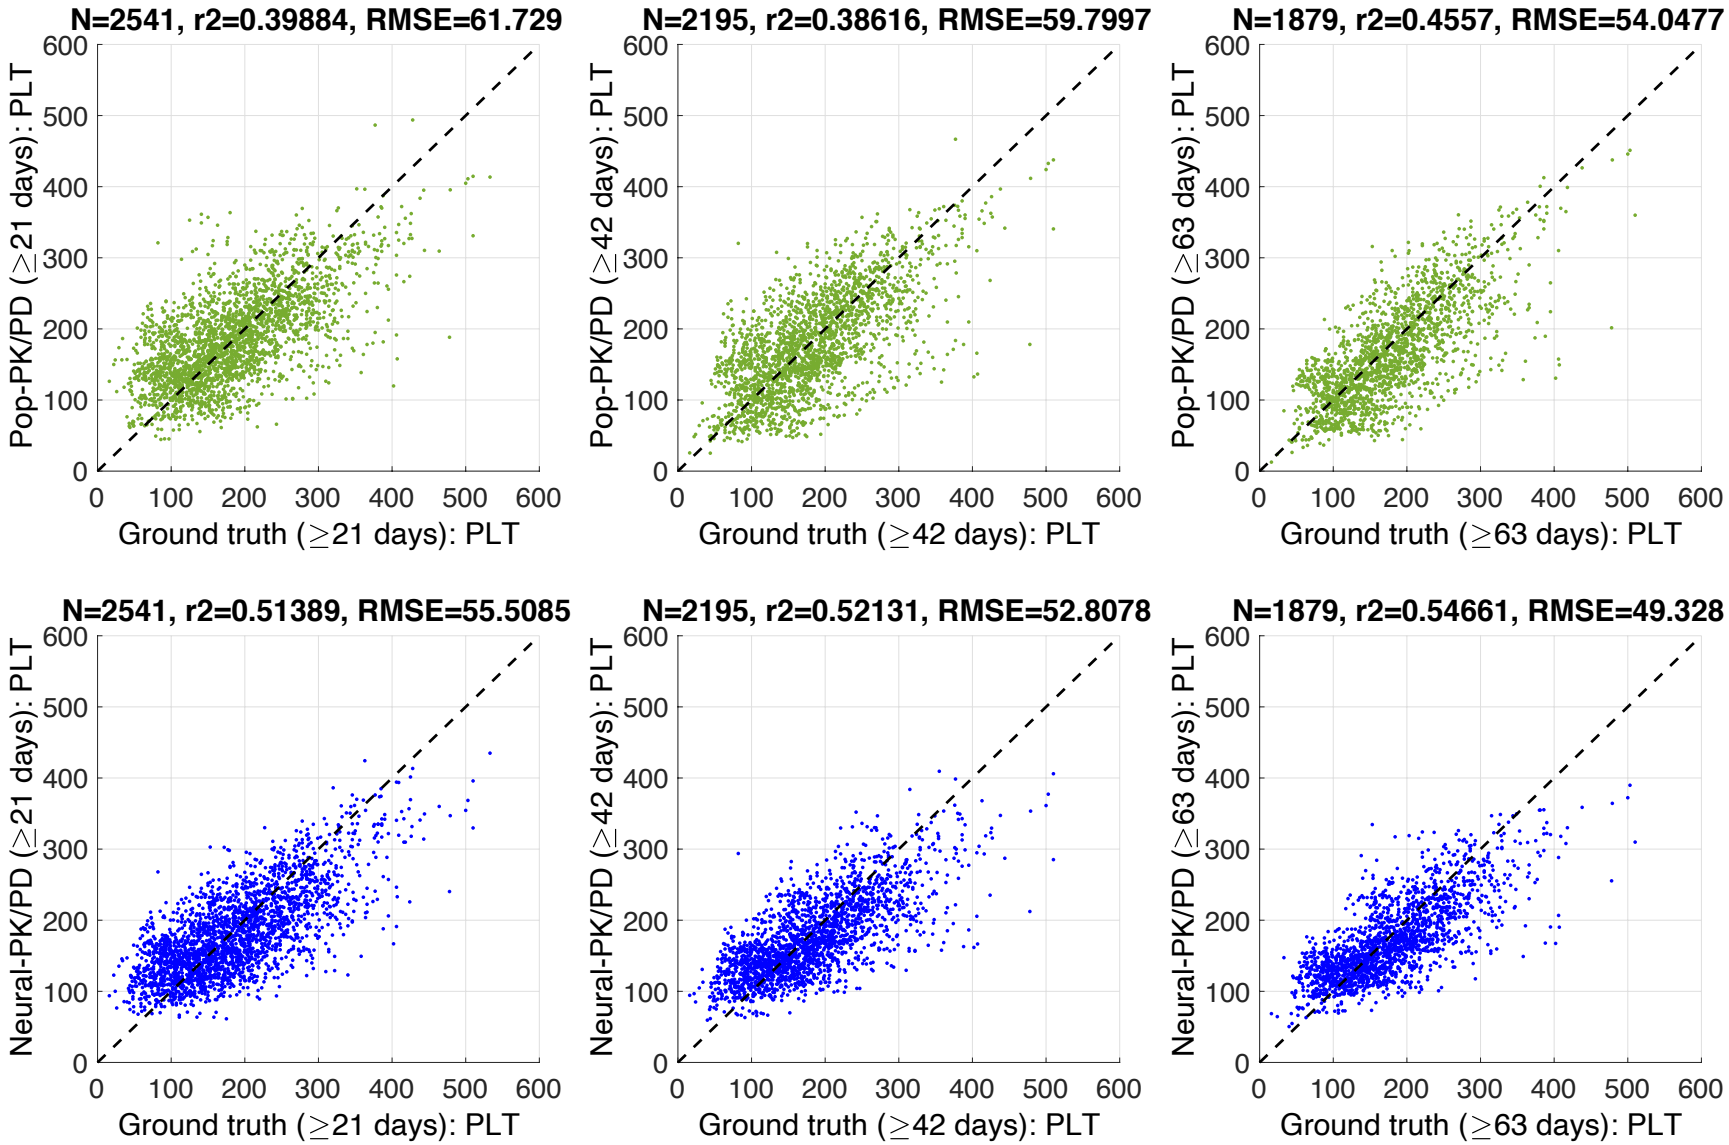




Neural-PK/PD Enables Accurate Individual Predictions

Genentech
A Member of the Roche Group

	Observing Cycle 1	Observing Cycles 1 & 2	Observing Cycles 1 to 3
Population PK/PD	N=2541, r2=0.39884, RMSE=61.729	N=2195, r2=0.38616, RMSE=59.7997	N=1879, r2=0.4557, RMSE=54.0477
Neural PK/PD	N=2541, r2=0.51389, RMSE=55.5085	N=2195, r2=0.52131, RMSE=52.8078	N=1879, r2=0.54661, RMSE=49.328

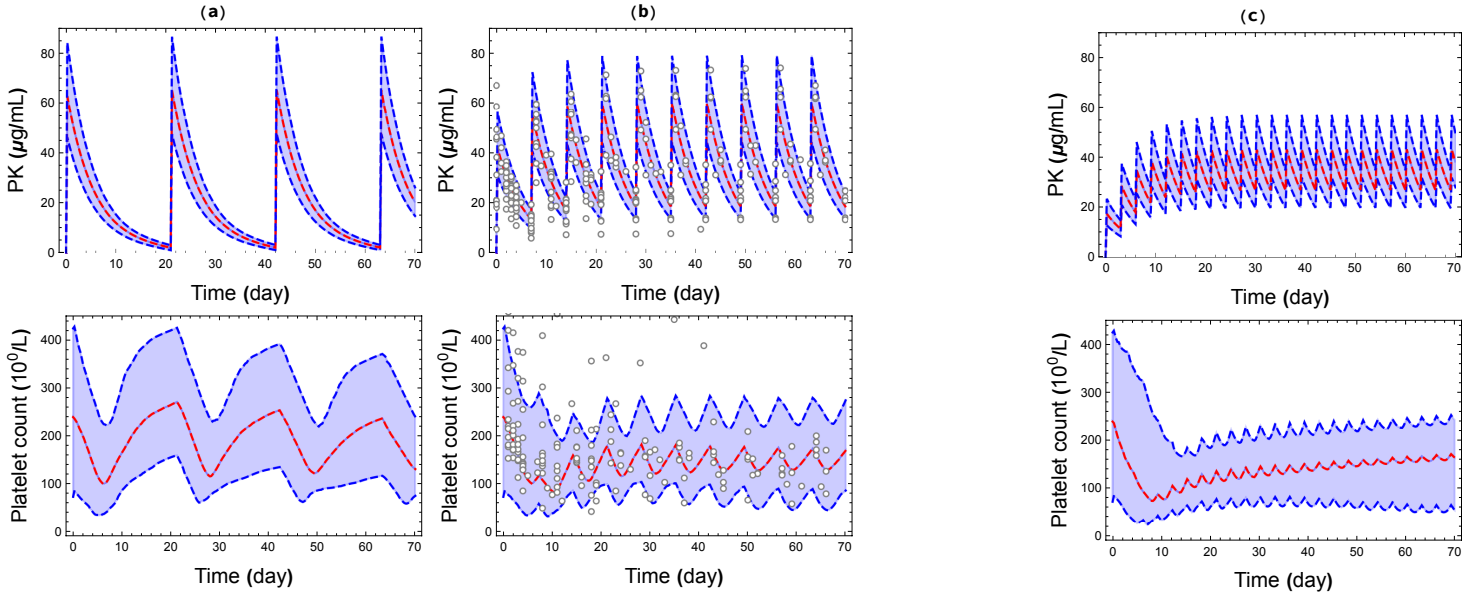


Neural-PK/PD Simulation of Dose Schedules

Genentech
A Member of the Roche Group

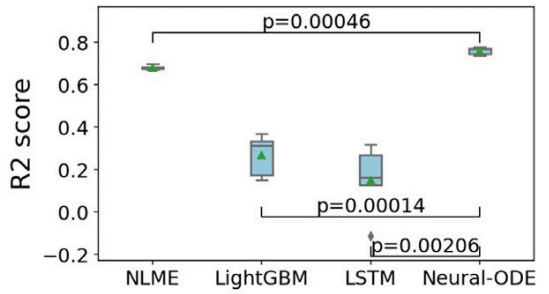
- Can the deep learning model generalize to unseen dose schedules?

Simulation: Q3W **Simulation: Q1W** **Simulation: Q3D (untested)**



- Not all machine learning models can generalize well:

Q3W to Q1W: PK Prediction



Genentech

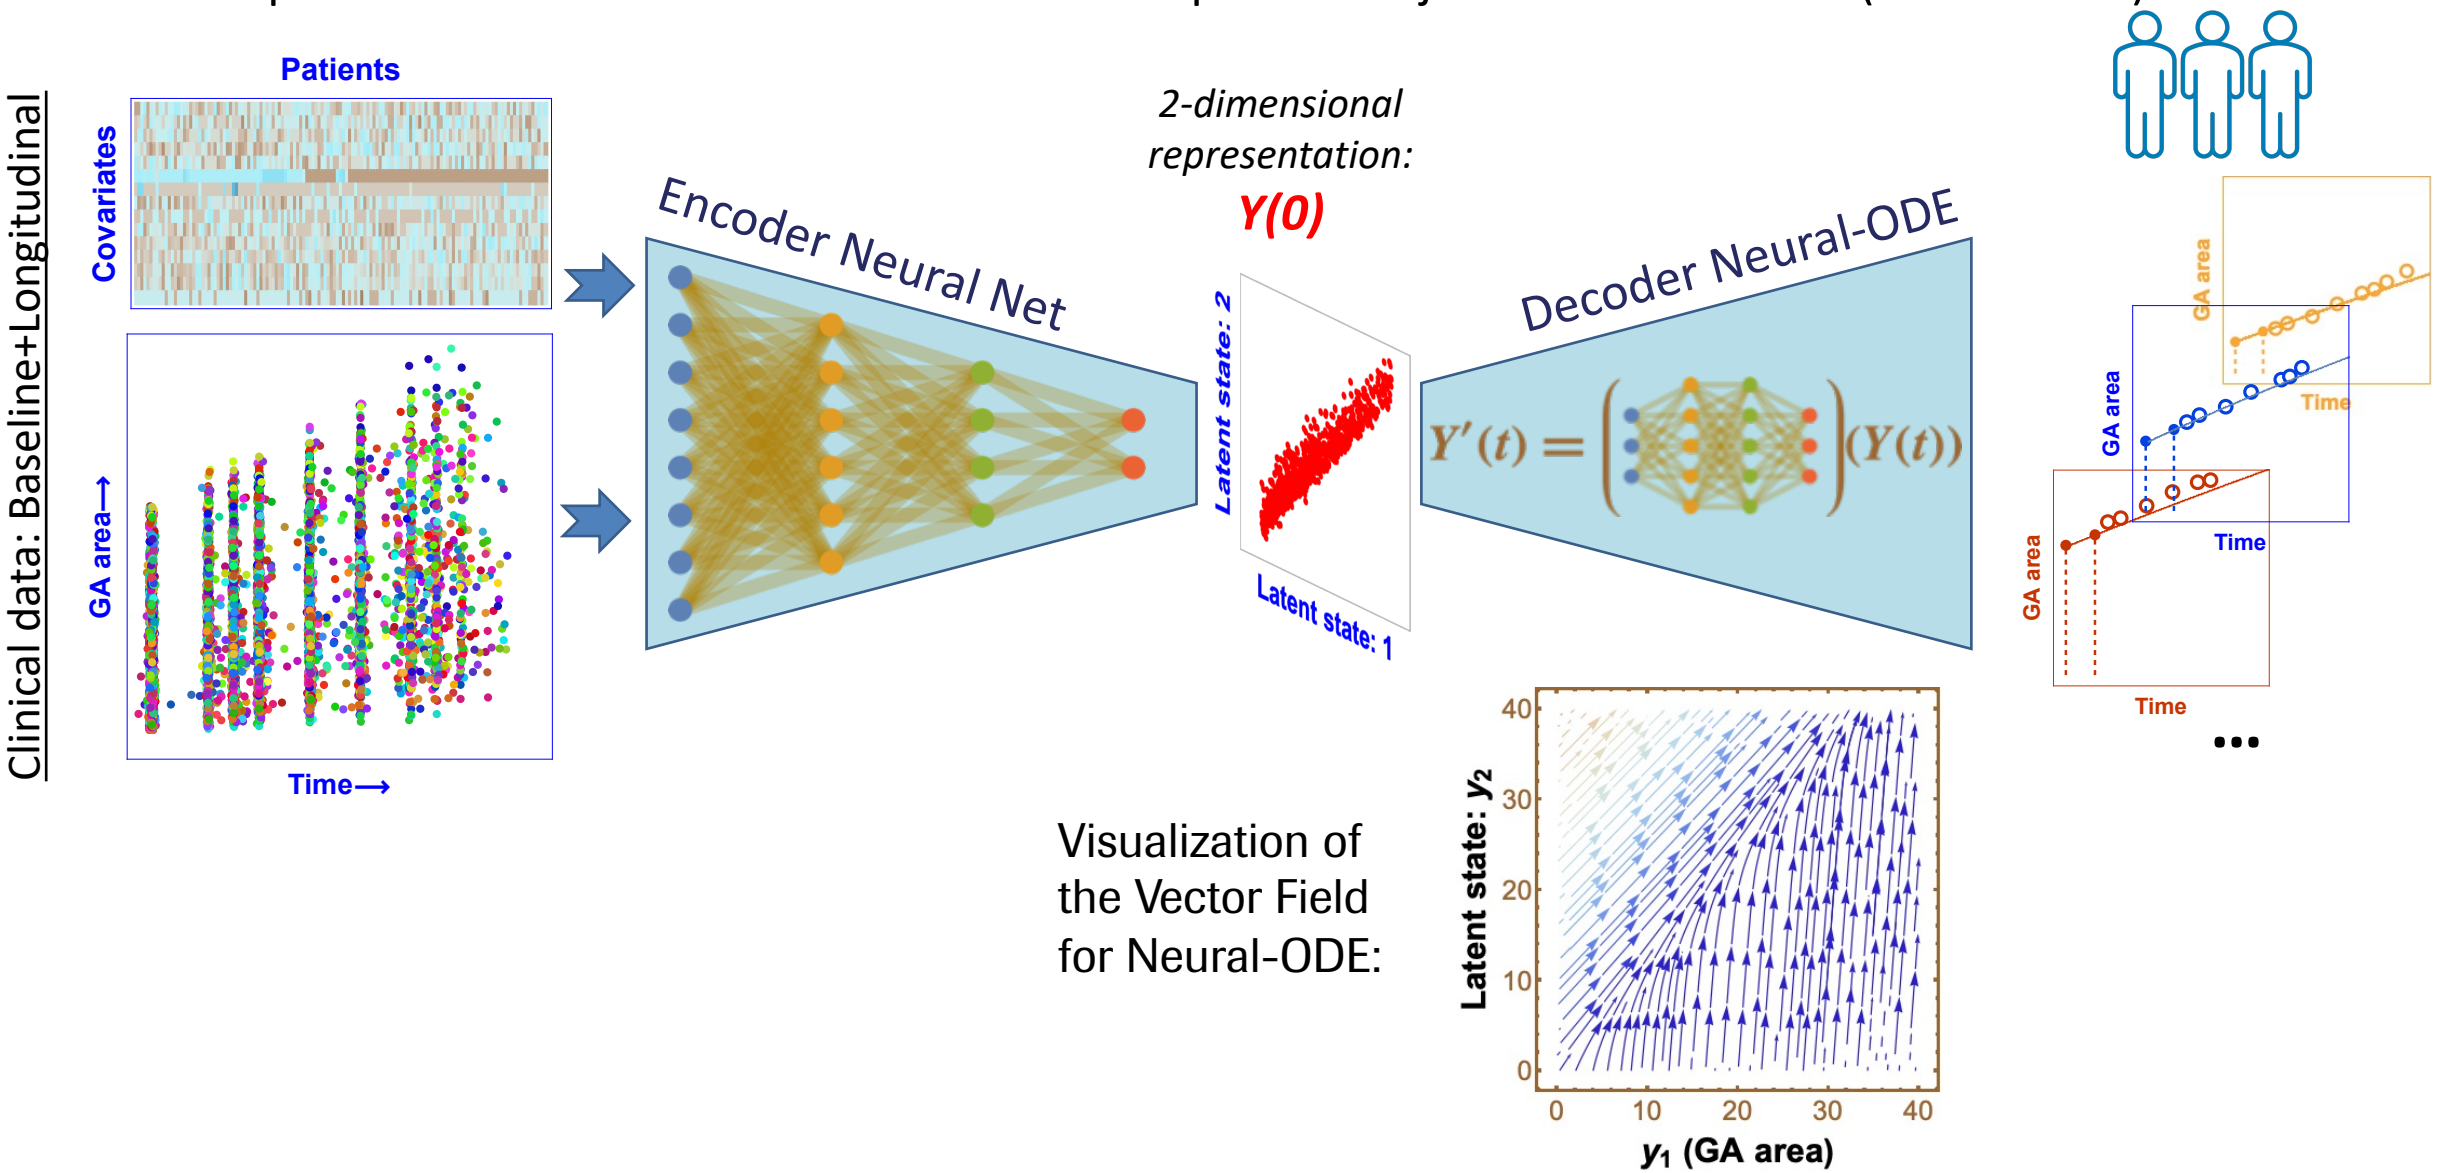
Geographic Atrophy (GA)

DISEASE PROGRESSION MODELING

Creating Digital Twins for GA Disease Progression

Genentech
A Member of the Roche Group

- Develop Neural-ODE model to forecast individual patient trajectories of GA area (if untreated)

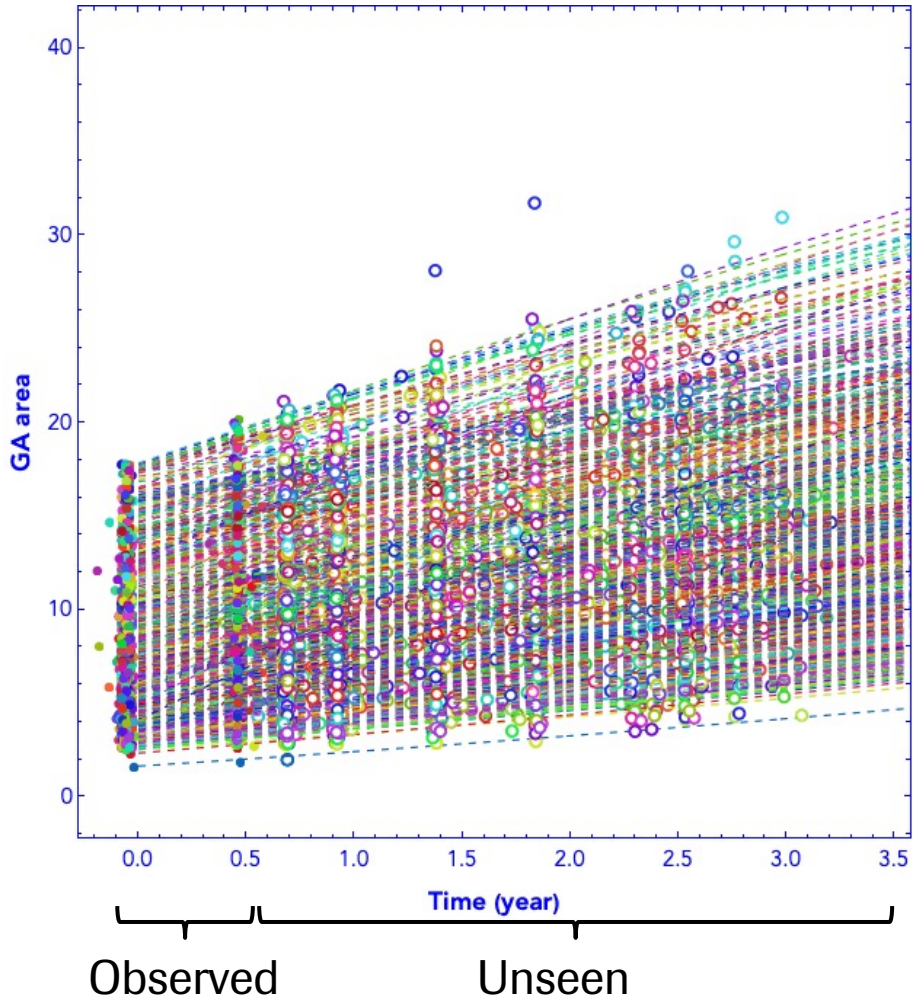


Prediction of Individual Patients on a Test Set

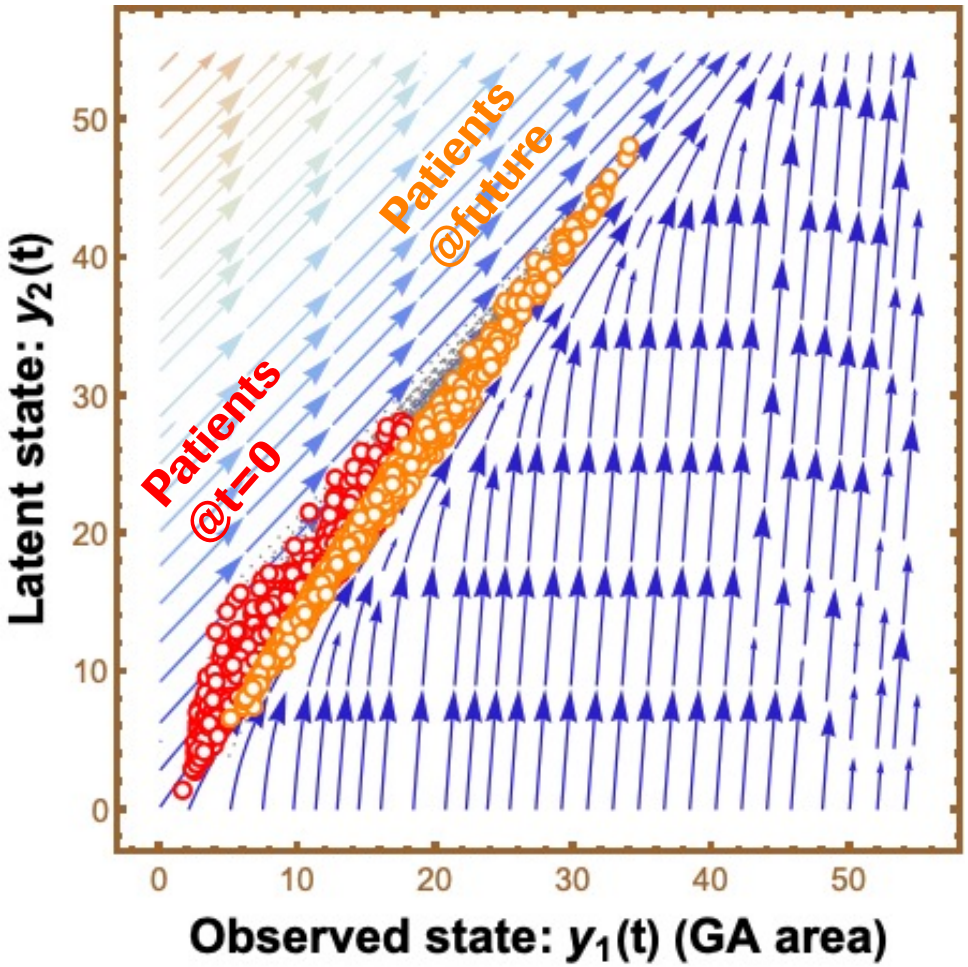
Genentech
A Member of the Roche Group

- Using Neural-ODE to predict subsequent GA areas from the first two observations:

Time-Course



Disease State



Conclusions

Genentech
A Member of the Roche Group

- Neural-ODE is a natural and versatile approach to fuse Dynamical Systems with Deep Learning
  - Pharmacological assumptions can be built into the architecture
  - Applicable to both PK/PD and Disease Progression settings
  - Can readily incorporate multi-modal data using the language of neural networks
